Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

Read more about Early Journal Content at http://about.jstor.org/participate-jstor/individuals/early-journal-content.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

SCIENCE

FRIDAY, SEPTEMBER 30, 1921

The British Association for the Advancement of Science:
Problems of Physics: PROFESSOR O. W. RICHARDSON 283

Scientific Abstracting: DR. GORDON S. FULCHER 291

Scientific Events:
The National Committee on Mathematical Requirements; Henry Woodward; Professor Pawlow 295

Scientific Notes and News 297

University and Educational News 300

Discussion and Correspondence:
A New Definition of Pure Mathematics: PROFESSOR G. A. MILLER. *Gall Evolution:* DR. B. W. WELLS. *On Sounds Accompanying Auroral Displays:* DR. HEBER D. CURTIS. *Lawrence's Warbler:* PROFESSOR JAS. LEWIS HOWE 300

Quotations:
Chemistry in War 302

Scientific Books:
Bibliography of Relativity: DR. FREDERICK E. BRASCH 303

Special Articles:
Einstein's Cosmological Equations: PROFESSOR EDWARD KASNER. *The Production of Enhanced Line Spectra by a New Method:* R. A. SAWYER AND A. L. BECKER. 304

The Iowa Academy of Science: DR. JAMES H. LEES 306

MSS. intended for publication and books, etc., intended for review should be sent to The Editor of Science, Garrison-on-Hudson, N. Y.

PROBLEMS OF PHYSICS[1]

MY predecessor in office a year ago reminded you that the theoretical researches of Einstein and Weyl suggest that not merely the material universe but space itself is perhaps finite. As to the probabilities I do not wish to express an opinion; but the statement is significant of the extent of the revolution in the conceptions and fundamental principles of physics now in progress. That space need not be infinite has, I believe, long been recognized by geometricians, and appropriate geometries to meet its possible limitations have been devised by ingenious mathematicians. I doubt, however, whether these inventive gentlemen ever dreamed that their schemes held any objective validity such as would assist the astronomer and the physicist in understanding and classifying material phenomena. It is not certain that they will; but the possibility is definite. Apart from this, the whole development of relativity is an extraordinary triumph for pure mathematics. Had Einstein not found his entire calculus ready to hand, owing to the purely mathematical work of Christoffel, Riemann, and others, it seems certain that the development of generalized relativity would have been much slower. It is a pleasure to be able to acknowledge this indebtedness of physics and astronomy to pure mathematics.

Relativity is the revolutionary movement in physics which has caught the public eye, perhaps because it deals with familiar conceptions in a manner which for the most part is found pleasantly incomprehensible. But it is only one of a number of revolutionary changes of comparable magnitude. Among these we have to place the advent of the quan-
